

# NEWS

MAY 2007

Welcome to another exciting season on the shores of Canandaigua. Hopefully everyone has weathered the winter season well and we will be blessed with good weather.

Your East Shore Association of Canandaigua Lake has had a busy fall and winter with development pressure to construct housing projects along the lakeshore and in the watershed. Many public, residential and elected groups are concerned since the lake can only accommodate so much growth before its ecosystem will suffer. Our legal support to the many agencies attempting to control developmental concerns has been rewarding, but expensive. To date our efforts on the RSM Development that encompasses the German Brothers Marina and the upland area across the road up to the ridgeline has cost in excess of \$24,000 in legal representation. We thank all who have contributed to our legal fund making it possible to pursue legal protection to lake development. Presently, the developer has appealed the rulings of the Town of Canandaigua's Zoning Board of Appeals to the New York State Supreme Court. The Court heard arguments from the Town of Canandaigua, residents next to the development, the Canandaigua Lake Watershed Alliance, and your East Shore Association. We are awaiting Judge Kocher's decision on the review of the appeal.

No matter what the court's decision, we cannot afford to ignore development that would risk our beautiful lake. Last October, I authored a guest essay for the Canandaigua Sunday Messenger. In that essay, headlines were made of my statement, "It is the beauty of Canandaigua Lake that has attracted these developers in the first place and we should not give up our control to protect the lake for someone to turn a profit."

We have been blessed with a pristine lake with a water quality rating of AATS, which is the second highest category. Our lake provides drinking water to over 50,000 people, an excellent fishery, and a world-class natural resource for family recreation. The environmental and economic impact of

pollution from overdevelopment would be catastrophic.

Every resident and public official of the greater Canandaigua Lake area should get involved with the many developmental pressures that will impact the future of this natural resource. It is not a simple decision to grant development rights when the density, erosion, waterfront usage and environmental issues need to be understood as to their far-reaching impact that could occur years later.

There is no middle ground here. Being an elected or appointed government official is not easy, and many decisions have to be made that don't please everyone. When it comes to a natural resource we are better off to limit the risk of damage than to proceed ahead and then react to an unfortunate result. Lake pollution is not pretty and its effects will take years and huge resources to clean up. It is the beauty and pristine quality of this lake that has attracted developers in the first place. If our lake was polluted, these same developers would not be interested in building here.

Logical, controlled, and environmentally sound development is good for any area as long as the uniqueness of its geography is respected. Our association is not opposed to development as long as the developers utilize resource practices that protect the ecosystem. Land in the watershed surrounding the lake is not always well suited for development. The soils may be heavy with high runoff, rock subsurfaces are close to topsoil, steep slopes when disturbed can present pollution concerns, and over-density of subdivisions can pollute runoff to the lake. Your continued support is much appreciated.

See you at our annual meeting, July 28 at the Crystal Beach Firehouse on East Lake Road (Route 364). Coffee will be served as of 8:30 am with the meeting starting at 9:00 am.

*Tony Busch, President*  
East Shore Association

## ESA ANNUAL MEETING, SATURDAY, JULY 28, 2007

Our annual meeting will again be held at the Crystal Beach Fire Hall, on Saturday, July 28, 2007. Coffee will be available at 8:30 am and the meeting will start promptly at 9:00 am. We have invited several speakers to give concise updates in their areas of expertise and have the following agenda:

- ESA Financial Reports
- ESA Bylaw Update on Changes and Membership Approval
- Assemblyman Brian Kolb—Update on State's Discussions Concerning Taxation Reforms
- Status and Challenges of Canandaigua Lake's Water Quality
- Update on Canandaigua Lake Developments and ESA Involvement in Them
- ESA Legal Fund Status and Importance

Other relevant topics maybe added as final plans are made for the annual meeting.

Additionally, we will be introducing the new members of our board. Please join us.

### CELEBRATION OF THE RING OF FIRE

In 1953 Dr. Arthur Parker suggested to the East Shore Association of Canandaigua Lake that they sponsor an annual celebration in the fall with a ring of fire around the lake with a signal fire on Bare Hill. They accepted his suggestion and according to a newspaper article dated September 7, 1953, Dr. Parker stated that it was about 100 years ago that the Senecas last built their festival fires along Canandaigua Lake. On this night in 1953, hundreds of cottagers set off the ring of fire on the very ground that the Senecas once built their fires of thanks for good hunting and fishing. Up until 1880 a few Senecas still went to Bare Hill and burned sacred tobacco on a rock.

The celebration of Genundowa or the Festival of Lights has been continuous since 1953, but the lighting of the

signal fire on Bare Hill had lapsed until the Town of Middlesex Heritage Group, through the efforts of Stuart Mitchell and Peter Jemison, reinstated the practice in 1989. This year the celebration will be held on Saturday, September 1. The signal fire will be lit at 9:00 pm. As it is a long walk, you should plan to start at 8:00 at the parking lot. Watch for news of the Overacker School House Celebration for Seneca Heritage Day. Last year because of the rain and wind the bonfire was cancelled. Let's hope for a better weekend in 2007! Again the event is sponsored by the East Shore Association and the Middlesex Heritage Group.

*Ruth Clark, Historian,  
Town of Middlesex*

**Reminder:** Flare sales fund the activities of your ESA. Please purchase your flares at our flare retailers listed on page 17.

## **EAST SHORE ASSOCIATION BOARD MEMBERS SERVE IN LOCAL TOWN GOVERNMENTS**

We thought it might be interesting to note some of our board members who also serve in local Town government. Directors Bob Brancato and Gene Hermetet recently were appointed members of the Town of Gorham Conservation Board. This newly created board was authorized by the Town Board to assist the town's planning efforts by addressing the best land uses for the Town. The Conservation Board, in concert with the Planning Board, will deal with the longer range issues associated with the Canandaigua Lake Overlay District, Agricultural Districts, land use development, and set-aside of land for open space and recreational uses.

In January, Tony Busch was appointed a Councilman on the Gorham Town Board. He is filling an unexpired term and will seek re-election to an additional four-year term this fall.

## **BECOME A MEMBER OF THE BOARD OF DIRECTORS OF THE EAST SHORE ASSOCIATION OF CANANDAIGUA LAKE**

We have several openings for directors to serve on our 15-member board. We meet six times during the year and have an annual meeting the last Saturday in July or the first Saturday in August.

Requirements are a desire to participate in issues that affect our lake and willingness, where necessary, to attend community meetings to gather information. Meetings during the year last no longer than two hours and start at 7:00 pm. Members must be property owners on the east side of Canandaigua Lake.

Directors serve without compensation but their efforts are very much appreciated!

Interested candidates should contact President Tony Busch by e-mail at [ajbusch@roadrunner.com](mailto:ajbusch@roadrunner.com) or by telephone at 394-1866.

## **ESA WELCOMES WENDY DUNSTER TO THE BOARD**

Wendy Dunster was elected to our board in January. She brings to the board a wealth of knowledge and holds a BS degree from St. Lawrence University and a master's degree from Nazareth College. Wendy resides in Fall Brook at the north end of the lake all year. She also serves on the board of directors of the Fallbrook Park Homeowners Association.

## **SUPPORT CANANDAIGUA LAKE AS A MEMBER OF ESA**

Please join the East Shore Association in helping protect the future of Canandaigua Lake and its watershed. We have been blessed with a great natural resource. Unfortunately, it is now being ecologically challenged by development and intensified use of its waters.

Your annual dues help fund the many activities of the East Shore Association. Legal representation is our largest expense, but necessary to obtain counsel on zoning and developmental issues. Association operating expenses comprise development and support of our web page, the Annual Ring of Fire Celebration, ESA Annual Meeting, association annual newsletter, and member e-mail notification of events that could impact the lake our property. The board of directors serves with no compensation.

We need your support both as a member and financially. Please complete the Membership Application on the back of this newsletter and mail along with your dues.

# ESA SUPPORTS THE CANANDAIGUA LAKE WATERSHED COUNCIL

Canandaigua Lake Watershed Council priorities for 2007.

A little bit of watershed history first. Since the late 1980s several groups have been working together to protect the lifeblood of our region, the Canandaigua Lake Watershed. In the early 1990s, Ontario and Yates county agencies, the Watershed Commission (five water purveyors), FLCC, along with citizen groups such as the Watershed Alliance (previously Task Force and Pure Waters) and East Shore Association, played a central role in getting the municipalities to take a leadership role in the protection of the watershed. Through the various organizations' combined efforts the 14 watershed and water purveying municipalities signed an intermunicipal agreement forming the Canandaigua Lake Watershed Council and agreed to adopt the watershed plan and help fund the implementation effort. The Watershed Council, consisting of publicly elected leaders from each of the 14 watershed and water purveying municipalities is the lead entity in implementing the watershed protection effort.

These same agencies and groups that helped create the Watershed Council are now essential partners in the implementation of the watershed protection effort. The Watershed Council has no land use authority or authority over any other entity, but works as an umbrella organization with the 14 member municipalities and our independent program partners. No one municipality, agency, or organization could comprehensively protect our watershed. By working together, the Watershed Council and its multiple independent partners are able to jointly provide comprehensive protection. This intermunicipal and interdependent management approach has been recognized through numerous grants along with state and national awards.

The Watershed Council's 2007 work plan exemplifies this interdependent management approach. Most of our projects will utilize the expertise provided by many of our partners in order to get the best results at the lowest cost. It is also important to recognize that our partners have independent programs that greatly increase the scope of the overall protection effort. To list each of these projects

would be beyond the scope of this article.

We have broken our watershed program down into four broad program areas: education, research, restoration/protection, and regulation. As no one entity can comprehensively protect the watershed, no single approach can comprehensively protect the watershed. Regulations must be coordinated with education, research, and restoration in order to truly protect a watershed.

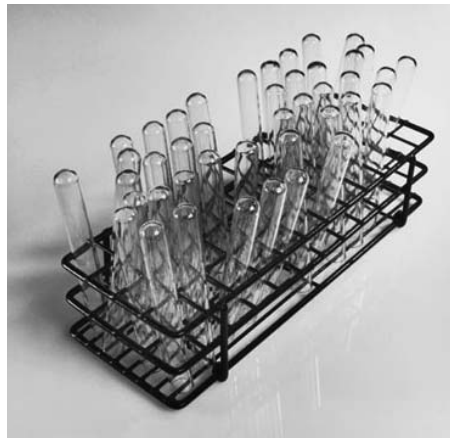

## Education:

- Spring 07 lake-friendly lawn care mailing to watershed residents.
- Work with Cornell extension and local commercial fertilizer retailers to provide a zero-phosphorus fertilizer alternative. Area soil tests document that in most cases lawns do not need additional phosphorus.
- Replace aging watershed boundary signs. The new signs will be a more vibrant reminder that this is a special area to protect.
- Continue to do outreach efforts with schools and community groups.
- Assist the Watershed Alliance with their focused educational program for middle/elementary school kids. Provide materials and maps and attend classes as necessary. Septic system training program for installers and inspectors—multiple partners.
- Install educational kiosks at public parks.

## Research:

Dr. Bruce Gilman of Finger Lakes Community College is our main watershed research partner. Dr. Gilman and I provided a "State of the Watershed Report 2006" that is on our website: [www.canandaigualake.org](http://www.canandaigualake.org). Our 2007 program will continue the research on multiple components:

- Monthly lake sampling to assess the quality of the lake
- Storm event sampling of approximately 20 streams during five storm events and 12 monthly baseline samples.
- Complete stressed stream analysis on Eelpot Creek.
- Sampling development sites and other areas of possible pollution during storm events.
- Evaluate riparian corridors for their ability to protect stream water quality.
- Partner with the county and other entities to develop a non-point-source water pollution model to identify areas most likely to generate polluted runoff.

The non-point pollution prediction model combined with our water quality monitoring program and field research can help us identify potential hot spots so that we can work to reduce their impacts.

### **Restoration/Protection:**

We have multiple partners in this effort. The 2007 program includes:

- Work with the Town of Canandaigua to complete the creation of a two-acre storm-water wetland and 1,500 feet of stream restoration near the Civic Center.
- Implement recommendations in a recently completed storm-water study of Sucker Brook to include storm-water facilities on school district and Canandaigua Wine properties to solve existing flooding/water quality issues.
- Complete remaining stream stabilization sites on the brook.
- Cost share with private landowners to protect streams that run through their property. \$25,000 of cost-share assistance is available to agricultural, residential properties and timber harvesting operations. The money will be used to encourage landowners to implement practices such as stream buffering and installing enhanced erosion control practices. This cost-share program will help to reduce sediments, nutrients, pesticides, and bacteria from entering streams and eventually Canandaigua Lake.
- \$1,500 to stabilize several segments of a stream along a recently built walking trail in the Town of Gorham/Village of Rushville.
- The Watershed Council has \$20,000 available to partner with land trusts and local government to assist in purchasing important open-space areas that will positively impact water quality.
- The Watershed Council has budgeted \$20,000 in cost-share assistance to further the wastewater management design work in the Village/Town of Naples.
- \$5,000 to assist the Town of Middlesex in studying the storm-water issues on South Lake Road.

### **Regulation:**

- The Canandaigua Lake Watershed Commission (five purveyors) has regulatory authority over septic systems in the watershed. The Watershed Council was able to obtain \$40,000 in grant funds to assist the Commission in improving their databasing of over 4,000 systems and increase the level of the inspection program.

- The Watershed Council formed a land use subcommittee to review existing regulations and recommend approaches in three areas: storm-water/erosion control, steep slopes, and water courses. The committee is made up of municipal representatives, and county and regional planning personnel. Recommendations should be forthcoming this spring. Provide a forester and training for towns that adopt the timber harvesting law.

We believe that we have a robust plan of work to protect the watershed. Revenue will continue to come from multiple sources to assist in paying for many of our projects. The budget is symbolic of the partnerships that have been created to implement the watershed protection effort. Maintaining and enhancing these partnerships will be critical to the long-term financial and environmental success of the watershed program.

## ESA MEETS WITH TOWN ASSESSORS

ESA representatives met with: Dirk Davey, Gorham Assessor; Patrick Grimaldi, Middlesex Assessor; and Don Collins, Canandaigua Assessor.

Purpose of the meetings was to better understand the assessment processes for lakefront property “land valuation.” (We did not focus on the process for placing value on the property’s structures, other than how it relates to getting to the property’s land value.)

### Key points identified:

Towns are mandated by the State of New York to be assessed at 100%. If not, there are penalties. In order to fulfill New York State’s requirements, the Assessor’s plan is to review “neighborhoods” annually and reappraise biannually. Each Town has “Neighborhoods.” Neighborhoods are based on common qualities of the properties.

All municipalities in Ontario County use a software system called “V-4”. Incorporated in this is the “Marshall/Swift Cost Analysis System.” The software has certain “elements,” “influences,” formulas and criteria used in property evaluation. But it also requires a certain amount of “design model” and other “town-specific information.” The assessor tries to make the process as objective as possible but there are certain components that remain subjective.

The assessor’s goal and obligation is a fair assessment. They are trained to do this. The process, at times, can be confusing and some parts subjective. The property owner knows their property. So it is important for the property owner to make sure the information on their property is accurate.

Each of the three townships has some variation on how they approach the assessment and valuation of the lakefront properties. This is due to a number of factors, such as topographical structure of the lakefront, access to sewer and water, etc.

The assessor’s process in assessing a property consists of a “Field Review Number” (visit to property), the cost analysis, and analysis of comparable sales (these are recently sold properties in the respective towns during the previous time period of July 1 through June 30).

In 2006 the Town of Gorham’s total property assessment is approximately \$482.5 million. The lakefront properties’ assessment is approximately \$230 million, which is about 47% of the total.

In 2006 the Town of Canandaigua’s total property assessment is approximately \$1 billion. The lakefront properties assessment for the east side is approximately \$59 million and the west side is approximately \$114 million.

In 2006 the Town of Middlesex’s total property assessment is approximately \$139 million. The lakefront properties assessment is approximately 60% of the total.

ESA will continue to monitor the real property taxes on properties along the lake. Increases have been significant over the last two years. Many taxpaying homeowners cannot even vote on school budgets and other legislative actions that impact their taxes. We have assigned a committee to look into the property taxes and if there is anything we can do as an organization.

*Robert Brancato and Don O’Neill*  
Directors

## WARNING!

### NEW FISH HEALTH REGULATIONS

Fish in New York may be in trouble. Recently, Viral Hemorrhagic Septicemia (VHS) has been found in some New York State waters. VHS is fatal to many

fish species including bass, yellow perch, bluegill, and pumpkinseed. VHS is not harmful to humans. In order

to slow the spread of this disease, the DEC has issued the following regulations regarding bait:

- Personally harvested bait fish can only be used in the same body of water from which they were caught and cannot be transported overland by car.
- Certified (by the state) bait fish purchased from a bait dealer can be used anywhere within seven days. For bait fish to be certified, a dated receipt must be obtained at the time of the retail sale that verifies the bait as certified. The receipt is good for only seven days.
- Dead bait fish that have been packaged for commercial sale and have been preserved by methods other than by freezing can be used anywhere.

## THE EAGLES HAVE LANDED

In February, a pair of bald eagles were spotted on Canandaigua Lake. An impressive sight when they are flying. These eagles had over a six-foot wing span and looked to weigh about 14 pounds. They have been seen from Squaw Island to Woodville. Rumor has it that they were nesting in the softwoods on the cliffs near Bristol Harbour. However, they have not been seen since April.

A bald eagle can fly over 30 miles per hour and they have been clocked at over 100 mph on a downward dive. These bald eagles would be a great addition to our lake. Something to spot, watch, and enjoy.

The bald eagle maybe delisted as a threatened species as early as June of this year. The U.S. Fish and Game Service has issued guidelines on how the bald eagle should be protected by landowners and others, once it's no longer safeguarded as a "threatened" species. There are proposals which prohibit disturbing the bald eagle, which include disruption of its breeding, feeding, or sheltering practices, which could cause death, injury, or nest abandonment.

Our concern is that if the bald eagles nest in the area near Bristol Harbour, will area developments disturb their nesting, if it hasn't already—we will keep you posted.

- You cannot transport bait fish in your car unless it is certified, regardless if you caught them or you purchased them.

This means that there are no sawbellies being sold on the lake and you cannot use frozen ones. Our sawbellies come from Seneca and Cayuga lakes. There is an attempt to certify bait fish from these lakes but as of May 9 this has not happened.

Both bait fish shops on the lake are meeting the regulations. They do have shiners that are certified.

More info on the above can be found at <http://www.dec.ny.gov/33072.html>

There are no restrictions on eating fish from Canandaigua Lake other than the standard statewide advisories of 52 times a year. More info at: <http://www.health.state.ny.us/enviromental/outdoors/fish/fishengl.htm>

*Stuart E. Norris*  
*Director*

## **THE BUILDING BOOM CONTINUES— CANANDAIGUA LAKE DEVELOPMENTS**

Over the last year the active developments continued building homes on both sides of the lake. Projects that were in the planning stages have seen little physical activity since last year's newsletter. RSM development is on hold awaiting a decision from the NYS Supreme Court, Ketmar is tied up in the SEQR process with the DEC and the Department of Health, Bristol Harbour's housing development is awaiting DEC approval, and Spring Hill has been waiting for the imminent water extension approval. A new proposed development on Lincolnwood Farms for modular homes was rejected and is now reapplying to the planning board.

On the east side of Canandaigua Lake there are active developments with Spring Hill, East Lake View Estates, Deep Run, and Waters Edge and a new proposal from Framark Development. If the Framark development goes through, that would make the fourth major development in the mile and a half stretch of Route 364 for over 450 homes!

Traffic flow on already crowded East Lake Road, Route 364, continues to be a major concern. Although a traffic study based on current and projected conditions with the new housing has been undertaken, the DOT has not prioritized any possible solutions, all of which could be extremely costly. Along with monitoring building activity at the various developments, the Board will continue to focus on the traffic problem too.

On the west side of the lake there are active developments with RSM Development, Ketmar, Fox Ridge, Lakeside Estates, Landings, Lakewood Estates, Le Subdivision, Waterford Point, and Bristol Harbour's expansion.

We are monitoring all 14 developments around the lake but are most concerned with the projects that will directly affect the members of East Shore Association.

*Stu Norris, Director*

## **DEVELOPMENT PLANS FOR LINCOLNWOOD FARMS**

Framark Development has withdrawn the application to develop Montebello Estate on the former Lincolnwood

Farm (Corner Route 364 and County Road 1) in the Town of Gorham. This project was a manufactured home community consisting of 84 sites owned and leased by the developer.

The developer however is now back with a new project for the parcel and appeared before the Planning Board on May 14, 2007. The proposal now being considered would consist of subdividing the parcel into 68 lots. The lots would be clustered on the south side of the property and sold individually. Lot sizes would range from 10,000 to 28,000 square feet and in the aggregate would average 13,000 square feet. Dimensions for a lot would be 80' x 125' in the case of a 10,000 square foot piece; larger parcels would be slightly deeper.

The entire property is now 41.6 acres; the proposal would provide for approximately 14 acres of open space at the north end of the property. The remaining 27 acres would become home sites. For comparative purposes, home sites at Deep Run are approximately twice the size being proposed here. Phase 1 of the project would consist of 12 home sites followed by additional phases as the project moves to completion.

The developer was not forthcoming with the size of each home to be built. He estimated the sales price of a home might be in the area of \$150k to \$170k but did not preclude a home being only 950 square feet, the minimum home size allowed under current town zoning regulations. There was also no differentiation between stick-built homes and manufactured homes. There was no rendition of model homes designed for the area or architectural specifications for homes that might be built on a site. The Planning Board did suggest that the developer address these issues as plans were finalized.

The Lincolnwood Farm property includes lake access via a vacant land in Deep Run Cove. The Planning Board reaffirmed that under town code, such access could not be extended to purchasers of property within the proposed development; access could only be attached to one of the parcels. The developer acknowledged this but indicated his disagreement. This might be a further area of concern.

There were 15 to 20 people at the hearing, almost all from Cottage City. Questions from the public revolved around holding ponds for runoff water, traffic on Maiden Lane and other secondary streets, specifications for the houses to be built, tap-water pressure, and the status of several small parcels (3) located within Lincolnwood Farm that

have access to the lake via Deep Run Cove.

The Planning Board made a positive declaration under SEQR (State Environmental Quality Review) denoting the project may have significant environmental impact and designated itself as the lead agency to coordinate the environmental review. As the lead agency, the planning Board will solicit and receive inputs from various regulatory bodies on the effects of the project for that agency's particular area of jurisdiction. Inputs will include DEC, DOT, Ontario Dept of Health, Canandaigua Sewer District, Water District and Archeologists Report if the land is located in an area designated Historic by the State. The board may look to other agencies/consultants as appropriate.

Submissions of the developer including site maps are open for public view and can be seen at town offices. Additionally, inputs of various affected agencies under SEQR are open to public scrutiny once received. Please take the time to review these documents and share your thoughts with town officials.

Additionally, there is a planning board meeting on June 18 (7:45 pm) at the Town offices to further review the project. This is an ideal time to insure the town hears your reaction to the project. This writer is also available to receive your comments/questions.

*Jack Dailey*  
*Director*

## **SPRING HILL DEVELOPMENT**

The 62-home development is about to break ground on 14 lots. They are waiting for final approval for the water line extension and should be clearing the land by late summer. The Spring Hill subdivision consists of 69 acres with an entrance at 4045 East Lake Road (route 364) and is adjacent to the south boundary of the East Lake View Estates property.

ESA will be monitoring the construction phase with hopes that there will not be the water runoff problems that happened with East Lake View, including a large runoff that went into the lake.

*Dick Lieb, Director*

## **EAST LAKE VIEW SUBDIVISION UPDATE**

The East Lake View development completed 16 homes over the last 12 months. That brings the total to 40 out of the 246 home project. The builder has been granted approval for the final 15 homes to complete Phase C of Section 1.

Once the initial phase of Section 2 has been approved and building started, a second entrance to the project will be authorized off of Turner Road. It is now being used without improvements for construction vehicles only. The left-hand-turn lane off Route 364 at Turner Road will not be necessary until 85 houses in this section are completed.

*Dick Lieb, Director*

## **RSM WEST LAKE ROAD DEVELOPMENT LEGAL FUND NEEDS YOUR SUPPORT**

I have received many inquiries since our oral argument on February 6 of this year regarding when we can expect a decision from New York State Supreme Court. RSM West Lake Road, LLC, the developer seeking to build a 70-home subdivision with a massive lakefront clubhouse, docks for 116 boats, and a 53-car parking lot on the Johnson and German Brothers parcels on West Lake Road, appealed to the Supreme Court the Town of Canandaigua Zoning Board of Appeals' decision to overturn the Zoning Enforcement Officer's (ZEO) initial determinations that the lakefront development can legally occur under the "All Other Land Use" category of the Canandaigua Lake Uniform Docking and Mooring Law, permitting many more docks, boats, berths, and moorings than is otherwise allowed for property zoned residential.

The ZEO's determinations were reversed by the ZBA solely as a consequence of the appeals filed by the East Shore Association of Canandaigua Lake in conjunction with the Canandaigua Lake Watershed Alliance, and by three West Lake Road residents. The matter is now in Judge Kocher's capable hands and the best course of action is patience. While I am optimistic that the ZBA's decision will be affirmed by Judge Kocher, there are no guarantees that this will in fact be the outcome. If Judge Kocher agrees with RSM and reverses the ZBA, unless

## **BRISTOL HARBOUR EXPANSION**

this adverse decision is timely appealed to the New York State Appellate Division of the Supreme Court by the Associations, RSM will be able to proceed with its project as proposed, with dire consequences for Canandaigua Lake and this community.

Of course, even if Judge Kocher agrees with the ZB and affirms the ZBA's decision, this controversy may still not be at an end. RSM would then have the legal right to appeal to the New York State Appellate Division of the Supreme Court, and if again not successful there, then to the New York Court of Appeals, the highest court in New York State. Litigation is inherently very expensive and cases are too often won, not based on the merits of the action, but based on who has the deepest pocketbook. Unlike the not-for-profit associations, RSM seems to have a very deep pocketbook and an unlimited supply of money to pursue this matter in the courts.

This is where you come in—the good people of Canandaigua. The legislative history of the Dock Law makes very clear that its primary purpose was to prevent “intensive development of a relatively small portion of lakefront for a large number of upland residents” and to prevent “each upland residence” in such developments “from owning a boat.” This is exactly the kind of development proposed by RSM. Fundraising is a must if RSM is to be stopped and this very dangerous precedent for intensive, keyhole development along the shores of Canandaigua Lake is to be prevented.

Please consider making a contribution to the ESA legal fund. We are at a critical juncture and financial support is required for a positive outcome.

*Carol S. Maue, Esq.*

*Carol S. Maue is a partner with the Chamberlain D'Amanda law firm and is the attorney representing East Shore Association and the Canandaigua Lake Watershed Alliance, Inc., in the court case regarding RSM that is currently pending in New York Supreme Court in Ontario County. Ms Maue and her husband are also lakefront residents in the Town of Canandaigua.*

Last year we updated you on Bristol Harbour's plans to begin a 63–unit expansion consisting of 30 duplexes and three single-family homes located between Seneca Point Road and Cliffside Drive. As of this date plans aren't finalized and no construction has started and it is not immediately forecasted. They still have to obtain approval from the Department of Environmental Conservation relating to erosion control and site layout. This project had received Planning Board approval almost two years ago along with approval to expand the marina by 28 slips. The marina expansion permit was issued in February and began this spring with additional fingers added on the ends of the existing dock system. The approval by the Planning Board and permit allow for the addition of 28 slips but they plan to hold some of this for a future phase. This is the first addition of slips since the original dock system was replaced in 1989.

East Shore is concerned about more boats on the lake. The permits for the docks and slips were issued when the development was first built, more than 30 years ago and prior to the Docks and Mooring Laws. They have just started to add more slips. We feel that since the expansion stopped many years ago, the developer should reapply for permits and be subject to the DML that are now in existence. We will continue to monitor this project.

*Ted Carman, Director*

## **KETMAR DEVELOPMENT**

Ketmar's Seneca Point Landing proposal is for 20 homes and 25 slips and moorings and is currently in the SEQR process with the Department of Environmental Conservation. In November the DEC replied with an 11 page listing of questions regarding erosion control, lake access, grading, and tree clearing. As of this date the DEC has not released the document for public comment.

In the meantime, Ketmar has made some bold moves. Under current laws and regulations, a developer cannot offer for sale lots or homes without approval from the Department of Health. Ketmar at the time had not even submitted plans to the DOH. The DOH has declined enforcement of this violation. Ketmar has also started building a model home for their Seneca Point Landing project, directly across the street next to the B. Harbor

golf course. This was clearly advertised on their web site as such. But once the DEC was alerted that this is merely a segmentation of Seneca Point Landing (and very much against environmental laws), Ketmar suddenly claimed it isn't a model home for Seneca Point Landing and changed their website.

East Shore will continue to monitor this development because of the potential environmental problems, devastating visual aspects and to press for compliance with the Docks and Mooring Laws.

*Stu Norris, Director*

## **PHOSPHORUS FREE FERTILIZER CAMPAIGN**

A healthy lawn can be beneficial to water quality because it filters and purifies water as it enters the soil and reduces runoff. However, misuse or overuse of fertilizers, especially phosphorus, can have negative impacts on our lake and streams. Phosphorus is the main pollutant that drives algae blooms and aquatic weed growth. Excess plant growth can make lake activities less desirable because it makes lakes and streams look, smell, and taste bad. Also, some forms of algae are known to be toxic. Additionally, when these plants die and decompose, they reduce the amount of oxygen available to fish and other aquatic life.

Over the last 10 years, lake research is showing a rising trend in phosphorus concentrations. Over the last three years, this increase in phosphorus levels has correlated with several fairly intense algal blooms that are visually unappealing and were definitely noticeable to the nose!

Soil tests from the region conducted by Cornell Cooperative Extension have shown that most lawns do not need additional phosphorus. We are asking residents that if you choose to fertilize your lawn, that you only use a zero phosphorus fertilizer unless a soil test indicates otherwise. Phosphorus is the middle number on a bag of fertilizer (nitrogen, phosphorus and potassium). Research to date has shown that Country Max and Lowe's are stocking a zero phosphorus fertilizer. As important, if you use a commercial landscaping service, make sure they are using a zero phosphorus fertilizer or they have your soil tested. Phelps Supply has the ability to make a zero phosphorus blend for commercial landscapers.

Time the application when the forecast is rain free. Sweep up any spillage and avoid fertilizing near impervious surfaces, storm drains, or waterways. Although our primary concern is phosphorus, nitrogen can also be a problem so please follow label or soil test directions on the amount of fertilizer needed. Finally, be aware that many fertilizers are part of a "weed and feed" program that also have herbicides in the fertilizer bag. If all you need is fertilizer choose a brand that only has fertilizer in it.

Canandaigua Lake Watershed Council

## **PLEASE REGISTER AT OUR WEB SITE**

The East Shore Association is currently developing a web site. The purpose currently is for members to register their e-mail address for our database. Later the web site will be used to keep you informed of events that affect ESA members on Canandaigua Lake. Please register at [www.eastshoreassoc.org](http://www.eastshoreassoc.org). You may also e-mail your name and address to [membership@eastshoreassoc.org](mailto:membership@eastshoreassoc.org). Your e-mail address will not be shared outside of the Association and correspondence will not list addresses on the distribution list.

ESA is also seeking technically savvy volunteers to help design our web site for the benefit of our members. If you would like to help, please contact Stu Norris at [snorris@eastshoreassoc.org](mailto:snorris@eastshoreassoc.org). Thank you.

## PERSONAL WATERCRAFT LAW

### Personal Watercraft—Minimum Age of Operation

The minimum age of operators of personal watercraft (PWC) is 14. This new law took effect January 1, 2006. However, in order to minimize the impact on riders currently under the age of 14 certain allowances have been made to phase in this new law. Operators age 10 through 13 that have a boating safety certificate may continue to operate a PWC if they are in proximity of someone over 18 years of age and within 500 feet on another personal watercraft or vessel and within sight of that personal watercraft and holding a safety certificate of their own.

A Boating Safety Certificate is a certificate issued by the Commissioner, the United States Power Squadron, United States Coast Guard Auxiliary, or in the case of a nonresident his/her home state or country, as a result of completing a boater safety course.

Surprisingly this law only affects the operation of PWC's. Anyone over the age of 10 that holds a boating safety certificate can still operate a motor boat alone.

Boater Safety Classes fill up quickly and there are not that many offered. The NYS web site has a partial listing of classes at [http://nysparks.state.ny.us/boating/cls\\_boat.asp](http://nysparks.state.ny.us/boating/cls_boat.asp).

**IN MEMORIAM OF TWO FELLOW BOARD MEMBERS**

It is with much sorrow that we report the passing of two long serving Directors of the East Shore Association: Sue Heveron and Jim Robinson. Both were summer residents of the lake in Middlesex and represented the Association in that community. Their advice and support of the Association will be missed.
