CANANDAIGUA LAKE  
WATERSHED ASSOCIATION

## Canandaigua Lake Harmful Algae Bloom Forum

This summer, Canandaigua Lake experienced an unprecedented Harmful Algae Bloom event that impacted our use and enjoyment of the lake. For the first time ever, detectable levels of toxins were found in the drinking water supply of a community drawing water from Canandaigua Lake.

Please join us for this important community forum with leading experts to discuss results from 2018 monitoring efforts, the factors that influence algal blooms, and the local and Statewide efforts to protect our water resources.

Local efforts to monitor water quality and build resiliency in our watershed will be highlighted by CLWA and the Canandaigua Lake Watershed Council.

### Presentations will include:

**Rebecca M. Gorney, PhD**

Research Scientist, Division of Water  
Lake Monitoring & Assessment Section, NYS DEC

*"NYS DEC HABs Program: Results from 2018"*

**Anthony R. Prestigiacomo**

Research Scientist, Division of Water  
Finger Lakes Watershed Hub, NYS DEC

*"HABs in Low Nutrient Lakes: Mechanisms, Knowledge Gaps, and Moving Forward"*

**Lloyd R. Wilson, PhD**

Director of Drinking Water Program for NYS  
Bureau of Water Supply Protection, NYS Department of Health

*"HABs and Drinking Water"*
