

Viewpoints Seminar Speaker Series: Healthy Lawns, Healthy Lake

Join us to learn simple strategies that we can incorporate into our lawn and landscape practices to protect the health of the lake! Environmentally-minded professionals will teach us how to reduce our lawn pesticides and unnecessary fertilizer to protect water quality, and share tips for minimizing runoff and pollutants. Special emphasis on landscaping with native plants, and the creation of rain gardens.

Featuring Presentations from:

Broccolo Tree and Lawn Care

Broccolo believes that everyone has lakefront property through your connections to storm sewers in your residential neighborhoods. Representatives will present creative designs for rain gardens and natural functioning drainage swales to control storm water overflow. Your landscape design can minimize pollutants into our watershed including green algae reduction.

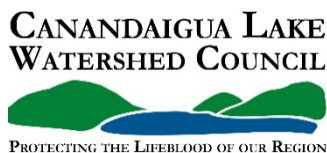

Ontario County Soil and Water Conservation District

Representatives will present information on lake healthy practices including knowing where your stormwater drains run to, fertilizers/pesticide use on lawns, installing rain barrels to conserve water, and much more.

Viewpoints Seminar Speaker Series Presented by:

CANANDAIGUA LAKE
WATERSHED ASSOCIATION
